2. Preamble

2.1. Abstract

TERN Ecosystem Surveillance have developed 19 modules to standardise ecological monitoring protocols for data collection. The working title for the monitoring protocols is *TERN Ecosystem Surveillance Ecological Monitoring Protocols*.

TERN Data Services and Analytics is developing a standardised data exchange specification to support the exchange of data collected using TERN Ecosystem Surveillance Ecological Monitoring Protocols. The working title for the data exchange specification is *Ecological Data Exchange Specification*.

The Ecological Data Exchange Specification is a profile of the ecological data model known as the TERN Ontology. Data that is conformant to the Ecological Data Exchange Specification is also conformant to the TERN Ontology.

2.2. Normative Status

This specification is normative for the exchange of data collected using TERN Ecosystem Surveillance Ecological Monitoring Protocols.

2.3. Standard Parts

This specification document is one of many resources that together form the Ecological Data Exchange Specification Profile.

Other parts of this standard include:

TBA.

2.4. Namespaces

Prefix	Namespa Name ce	Description
reg:	http://pu Registry Ontology rl.org/ linked- data/ registry#	Core ontology for Linked Data registry services. Based on ISO 19135 but heavily modified to suit Linked Data representations and applications.
sosa:	http://ww SOSA w.w3.org/ ns/sosa/	Sensor, Observation, Sample, and Actuator (SOSA) is a semantic data model to represent observations and samplings.

Prefix	Namespa N ce	Name	Description
tern:	https://w T 3id.org/ tern/ ontologie s/tern/	TERN Ontology	A profile of SOSA and PROV with minor additions to represent ecological field survey data.
unit:	dl/	QUDT Units vocabulary	A vocabulary of <i>units of measure</i> defined using the QUDT semantic data model.

3. Requirements

3.1. Domain Model Conformance

Requirements define the rules and constraints which data must conform to in order to be valid.

A *status* is assigned to each requirement. The *status* code list used in this document is defined by the Registry ontology and a subset of the status codes are redefined here:

- **submitted** A proposed entry which is not yet approved for use for use. Corresponds to ISO 19135:(redraft) 'submitted'.
- invalid An entry which has been invalidated due to serious flaws, distinct from retrirement. Corresponds to ISO 19135(redraft) 'invalid'.
- **stable** An entry that is seen as having a reasonable measure of stability, may be used to mark the full adoption of a previously 'experimental' entry.

Requirements that have been accepted and are **stable** are marked with a green check mark.

3.1.1.1.2. Result value

Property	Value	
Identifier	urn:shapes:plot-description:cover-class:result-value	
Label	Result value	
Definition	The value of rdf:value MUST exist in the Cover class codes controlled vocabulary.	
Comment	The value in sosa:hasResult MUST be a value in sh:in, which is the Cover class codes controlled vocabulary.	
Status	submitted O	
Conformance Classes	TBA	
Property	Value	
Controlled list items	The result value MUST be from the following list: bc bi c d i

3.1.1.3. Simple result

Property	Value	
Identifier	urn:shapes:plot-description:cover-class:simple-result	
Label	Simple result	
Definition	The observation's sosa:hasSimpleResult MUST have a value that is the same as the value in the value node of sosa:hasResult.	
Comment	Value of sosa:hasSimpleResult MUST be the same as the value in sosa:hasResult.	
Status	submitted O	
Conformance Classes	TBA

TBD.

4. Editors Notes

4.1. Working titles

Both this specification and the ecological field collection protocol do not have canonical names yet. The below will be changed and updated once formal names are provided by DAWE.

- Ecological Data Exchange Specification (this document)
- TERN Ecosystem Surveillance Ecological Monitoring Protocols

4.2. Placeholders

4.2.1. Placeholder text

Placeholder values TBA, TBD and TBC must be replaced with actual values.

4.2.2. Placeholder IRIs

IRIs of controlled vocabularies are currently placeholders with the namespace https://linked.data.gov.au/def/test/dawe-cv/. These IRIs must be replaced once the authoritative IRI is known.
