## 2. Preamble

### 2.1. Abstract

TERN Ecosystem Surveillance have developed 19 modules to standardise ecological monitoring protocols for data collection. The working title for the monitoring protocols is *TERN Ecosystem Surveillance Ecological Monitoring Protocols*.

TERN Data Services and Analytics is developing a standardised data exchange specification to support the exchange of data collected using TERN Ecosystem Surveillance Ecological Monitoring Protocols. The working title for the data exchange specification is *Ecological Data Exchange Specification*.

The Ecological Data Exchange Specification is a profile of the ecological data model known as the [TERN Ontology](#). Data that is conformant to the Ecological Data Exchange Specification is also conformant to the TERN Ontology.

### 2.2. Normative Status

This specification is normative for the exchange of data collected using TERN Ecosystem Surveillance Ecological Monitoring Protocols.

### 2.3. Standard Parts

This specification document is one of many resources that together form the Ecological Data Exchange Specification Profile.

Other parts of this standard include:

TBA.

## 2.4. Namespaces

| Prefix | Namespace   | Name                  | Description  |
|--------|---|-----------------------|--|
| reg:   | <a href="http://purl.org/linked-data/registry#">http://purl.org/linked-data/registry#</a> | Registry Ontology     | Core ontology for Linked Data registry services. Based on ISO 19135 but heavily modified to suit Linked Data representations and applications. |
| sosa:  | <a href="http://www.w3.org/ns/sosa/">http://www.w3.org/ns/sosa/</a>                       | SOSA                  | Sensor, Observation, Sample, and Actuator (SOSA) is a semantic data model to represent observations and samplings.                             |
| tern:  | <a href="https://w3id.org/tern/ontology/tern/">https://w3id.org/tern/ontology/tern/</a>   | TERN Ontology         | A profile of SOSA and PROV with minor additions to represent ecological field survey data.   |
| unit:  | <a href="http://qudt.org/vocab/unit/">http://qudt.org/vocab/unit/</a>                     | QUDT Units vocabulary | A vocabulary of <i>units of measure</i> defined using the QUDT semantic data model.  |

## 3. Requirements

### 3.1. Domain Model Conformance

Requirements define the rules and constraints which data must conform to in order to be valid.

A *status* is assigned to each requirement. The *status* code list used in this document is defined by the [Registry ontology](#) and a subset of the status codes are redefined here:

- **submitted** - A proposed entry which is not yet approved for use for use. Corresponds to ISO 19135:(redraft) 'submitted'.
- **invalid** - An entry which has been invalidated due to serious flaws, distinct from retirement. Corresponds to ISO 19135(redraft) 'invalid'.
- **stable** - An entry that is seen as having a reasonable measure of stability, may be used to mark the full adoption of a previously 'experimental' entry.

Requirements that have been accepted and are **stable** are marked with a green check mark.

For example:

| Property | Value   |
|----------|---|
| Status   | <b>stable</b> <input checked="" type="checkbox"/> |

#### 3.1.12.1.1. Datatype

| Property            | Value  |
|---------------------|--|
| Identifier          | <a href="#">urn:shapes:condition-vertebrate-pest-presence-plot-protocol-shapes:galls-and-lerps:datatype</a>          |
| Label               | Datatype   |
| Definition          | The value of <a href="#">rdf:value</a> <i>MUST</i> have the datatype xsd:boolean.                                    |
| Comment             | The value in <a href="#">sosa:hasResult</a> <i>MUST</i> be xsd:boolean.  |
| Status              | <a href="#">submitted</a> <input checked="" type="radio"/>   |
| Conformance Classes | TBA  |
